

Your Experts for Cleanroom Cleaning and Disinfection

For **40 years**, we have been reliably cleaning and disinfecting throughout Europe in **all cleanliness classes (GMP and ISO)** in the **pharmaceutical, life science and electronics sectors**.

Our service modules for you:

Basic Cleaning (FIRST)

After new construction, conversion, maintenance, product changes or accidents, your cleanrooms and associated systems will achieve the limit values in accordance with EU-GMP LF and ISO-14644 through a complete basic cleaning. We can also realise short-term assignments for you 24/7 with a team of up to 40 cleaners.

Special Cleaning

We also carry out special cleaning of machinery, bottling plants, satellites and rooms with special requirements (e.g. cold storage or heating rooms). Even extreme soiling or streak-free glass cleaning within your production and administration buildings is no problem for our team.

Regular Cleaning (CONTI)

We ensure that specified limit values for your cleanroom are reliably adhered to through daily/weekly routine cleaning in accordance with your process instructions – to maximise your process reliability!

Construction Cleaning

Cleaning is possible in all phases of construction progress: from rough cleaning during the installation of your cleanroom walls, through fine cleaning during qualification, to maintenance cleaning after qualification up to the point of official utilisation of your cleanroom.

On-Site Service

From logistics to stocking the airlock. We take the pressure off you with our qualified specialist staff, help you to optimise processes and thus ensure the quality and continuity of supply. You can concentrate on your core activities.

Your benefits at a glance:

- 
Qualified expert staff
 All our cleaning staff are qualified in our own cleanroom academy under real cleanroom conditions
- 
Experience & Know-How
 With 40 years of experience, we guarantee the highest level of quality, safety, adherence to deadlines and reliability
- 
Audit-proof documentation
 Cleaning documentation and, if applicable, documentation of anomalies in the cleanroom with regard to critical points & defects (silicone joints, loose sockets, etc.)
- 
Resources & core tasks
 No more problems with staff absence. Your employees can focus on their core tasks and production

Innovations in cleaning

The use of **innovative technologies** makes your **cleaning processes even more efficient and sustainable**.

Electronic cleaning and training documentation

On request, we can document our cleaning and training processes **electronically in real time**, including an **alarm function in the event of deviations** (error and deviation analyses). We use the **latest cleanroom-compatible hardware** and **GAMP 5-compliant software** for this.

Profit from the following benefits:

- ⊕ Complete transparency at all times
Room-related electronic cleaning and training plans (with images/pictograms if required) in accordance with your SOPs
- ⊕ Real-time management & real-time insight into the training status of employees
- ⊕ Ensuring compliance with all your cleaning frequencies
- ⊕ Immediate creation of reports for internal controls, audits and inspections
- ⊕ Direct exchange & cooperation with your contact person at the cleaning service provider
- ⊕ Reduction of manual documentation errors & time expenditure

Disinfection technology using nebulisation

With this new type of disinfection, **ionised H₂O₂** is applied **microfine** and spreads like a gas in **all directions**. It **reliably reaches the smallest corners, crevices, cracks and cavities**. It is carried out using **mobile devices** (backpack size) or **stationary devices** (suitcase size). Proven areas of application include healthcare, biotechnology, the food industry, pharmaceutical industry and veterinary medicine.

Your benefits at a glance:

- ⊕ Efficient
- ⊕ Thorough
- ⊕ Easy
- ⊕ Eco-friendly
- ⊕ Time saving
- ⊕ Professional
